Kagiso Ndlovu

Software Engineer

Johannesburg, South Africa — +27 00 000 0000 — kagiso.ndlovu@email.com — linkedin.com/in/kagisondlovu

ENGINEERING STACK

Services
Java, Kotlin, Python
Spring Boot, FastAPI

Web
React, TypeScript, Next.js

Data & events
PostgreSQL, Redis, Kafka, Elasticsearch

Cloud & delivery
AWS, Kubernetes, Terraform, CI/CD

Ways of working
API design, observability, testing, mentoring, code review

Education

BEng Computer Engineering
University of the Witwatersrand
2016 – 2020

AWS Certified Developer – Associate
2024

Outside Work

Contributor to engineering guilds. Presented "Practical API Operations" at the Johannesburg Developer Forum, 2025.

Professional Summary

Product-minded software engineer with experience building backend services and web applications for operationally important workflows. Known for making integrations easier to adopt, improving system visibility, and helping early-career engineers develop confident engineering habits.

Employment

Software Engineer May 2023 – Present
Meridian Retail Platforms, Johannesburg

- Led development of order-coordination services handling about 2.6 million events each month; strengthened idempotent processing and lowered duplicate-order incidents by 43%.
- Created a Kotlin and Spring Boot fulfilment API for four product teams, replacing manual integration steps with documented self-service access and test environments.
- Rolled out distributed tracing, service dashboards, and focused alerting, reducing median investigation time for production issues by 35%.
- Coached two graduate engineers and facilitated design discussions for quarterly platform work.

Software Engineer Jan 2021 – Apr 2023
Keystone Fintech, Sandton

- Delivered digital onboarding features with FastAPI, React, and PostgreSQL, improving completed customer applications by 18%.
- Engineered Kafka- and S3-based document workflows capable of processing up to 80,000 files on peak days.
- Worked with risk and compliance specialists to add traceable audit records, retention controls, and role-based permissions.

Selected Delivery

Internal Developer Hub *React, Next.js, Spring Boot, AWS*
Directed a three-engineer build to consolidate API discovery, access provisioning, and integration guidance; 12 internal teams adopted it within the first quarter.

Inventory Event Stream *Kafka, Redis, Kubernetes*
Implemented a near-real-time stock projection service, making inventory changes visible at checkout within seconds instead of after hourly batch processing.
