3rd Floor, Beacon House, 18 Harbour Street, Levenwick, LV2 4AH | www.northlightdigital-example.com

Engineering Manager — Web Development Team

Reference: REF: ND-ENG-2026-031

Location:	Levenwick HQ — hybrid (minimum 2 days/week on-site)
Department:	Product Engineering
Reports to:	Director of Engineering
Contract:	Permanent, Full-time (37.5 hrs/week)
Salary:	£72,000 – £85,000 per annum + bonus
Start date:	November 2026

About Us

Northlight Digital is a 140-person software company building booking and logistics platforms for the ferry and coastal transport sector. Our products handle over 9 million passenger bookings a year across four operating regions. The Web Development team is a cross-functional group of 8 engineers (frontend, backend and full-stack) responsible for our customer-facing booking platform.

The Role

We are looking for an Engineering Manager to lead the Web Development team through a major platform modernisation — migrating a legacy monolith to a service-oriented architecture while continuing to deliver features for a rapidly growing customer base. This is a people-first leadership role: you will line-manage the team, own delivery, and work with Product and Design on roadmap planning. Hands-on coding is expected at roughly 15–20% of your time.

Key Responsibilities

- Line-manage 8 engineers: 1:1s, performance reviews, career development plans and hiring
- Own team delivery: sprint planning, estimation, and coordination with Product and QA
- Drive the technical roadmap for the booking platform (React / TypeScript frontend, Node.js and .NET services, AWS)
- Lead architecture reviews and set engineering standards for code quality, testing and observability
- Manage the on-call rota and incident response for customer-facing services
- Champion accessibility (WCAG 2.2 AA) and performance across the web estate
- Report on team health, velocity and delivery risk to the Director of Engineering
- Contribute hands-on to critical-path work, code reviews and mentoring

Essential Requirements

- 5+ years of professional web/software engineering experience, with at least 2 years line-managing engineers
- Strong background in modern web stacks — ideally React/TypeScript and a backend language (Node.js, C#/.NET or similar)
- Proven experience leading teams through significant technical change (e.g. replatforming, monolith decomposition)

- Solid understanding of CI/CD, cloud infrastructure (AWS preferred), automated testing and observability
- Excellent communication skills — able to translate between engineers, product managers and executives
- Experience running agile delivery (Scrum or Kanban) with distributed or hybrid teams

Desirable (Not Essential)

- Experience in travel, transport or high-volume transactional booking systems
- Familiarity with accessibility standards and inclusive design practices
- Exposure to .NET to Node.js migrations or strangler-fig patterns
- Prior involvement in incident management at scale

What We Offer

- 10% employer pension contribution
- Private medical insurance and income protection
- £2,000 annual personal development budget plus conference allowance
- 28 days annual leave plus bank holidays, with option to buy 5 more
- Hybrid working with flexible hours around a 10:00–15:00 core

How to Apply

Apply via our careers portal at northlightdigital-example.com/careers, quoting reference ND-ENG-2026-031. Please attach your CV and a brief note (max 300 words) describing a team you've led through significant technical change. The process is: intro call (30 min) → technical/leadership panel → final interview with the Director of Engineering and a Product lead.

Closing date: Friday 18 September 2026, 17:00
