Core Strengths

Backend: Java, Kotlin, Python, Spring Boot, FastAPI

Frontend: React, TypeScript, Next.js

Data: PostgreSQL, Redis, Kafka, Elasticsearch

Delivery: AWS, Kubernetes, Terraform, CI/CD

Practice: Distributed systems, observability, testing, API design

Leadership: Mentoring, technical planning, code review

Education & Credentials

BS, Computer Engineering
University of Illinois Urbana-Champaign
2016 – 2020

AWS Certified Developer – Associate
Earned 2024

Profile

I build dependable backend services and pragmatic web experiences, with a focus on API design, developer velocity, and measurable product outcomes.

Experience

Software Engineer Mar 2023 – Present
Lone Star Commerce, Austin, TX

- Owned order-orchestration services processing 2.5M+ monthly events; redesigned idempotency handling and reduced duplicate-order incidents by 43%.
- Delivered a Kotlin/Spring Boot fulfillment API used by four product squads, reducing integration lead time from days to hours through self-service documentation and sandbox tooling.
- Introduced OpenTelemetry tracing, service-level dashboards, and actionable alerts; cut median incident diagnosis time by 35%.
- Mentored two graduate engineers and led technical design reviews for quarterly platform initiatives.

Software Engineer Jan 2021 – Feb 2023
Northstar Financial Technology, Chicago, IL

- Built customer onboarding workflows using Python, FastAPI, React, and PostgreSQL, improving successful application completion by 18%.
- Developed asynchronous document-processing pipelines with Kafka and S3, supporting peak volumes of 80,000 files per day.
- Partnered with security and compliance stakeholders to implement audit trails, data-retention controls, and role-based access policies.

Impact Projects

Developer Portal React, Next.js, Spring Boot, AWS

- Led a three-engineer initiative to centralize API discovery, access requests, and integration guides; adopted by 12 internal teams in its first quarter.

Real-Time Inventory Signals Kafka, Redis, Kubernetes

- Built an event-driven inventory projection service that made stock changes available to checkout within seconds rather than through hourly batch updates.

Community

Regular contributor to internal engineering guilds; speaker, “Making APIs Easier to Operate,” Austin Software Meetup, 2025.
