# RALPH SON OF A SHEPARD

Entry-Level IT Support | Operations & Technical Transition

*Scotland, UK* *Phone: available on request* *Email: available on request*

## Professional Profile

Reliable operations professional transitioning into entry-level IT support. Brings 10 years of experience working independently in a safety-critical, field-based environment where accurate monitoring, methodical troubleshooting, asset upkeep and clear record-keeping were essential. Eager to apply a practical, service-focused mindset to technical support and continue building formal IT knowledge.

## Professional Experience

### Field Operations & Asset Support

*Rural Operations Environment — Scotland | 2016–Present*

- Completed daily operational checks across distributed sites, identifying faults, risks and exceptions early and taking appropriate corrective action.
- Maintained accurate logs for activities, asset status, movements, incidents and routine maintenance, ensuring information was current and traceable.
- Performed first-line upkeep and minor repairs on operational equipment, access controls, water systems, vehicles and tools; escalated issues beyond scope.
- Managed priorities independently in changing conditions, responding calmly to urgent incidents while maintaining routine service levels.
- Worked to established safety, hygiene and operational procedures, demonstrating careful attention to compliance and risk control.
- Co-ordinated effectively with colleagues, suppliers and external service providers to communicate issues, arrange support and keep work progressing.
- Planned recurring work, monitored consumable supplies and kept essential equipment ready for use during peak-demand periods.
- Used observation, structured checks and practical problem-solving to diagnose operational issues and reduce downtime.

## Core Skills

- Incident identification and escalation
- Asset and equipment maintenance
- Preventive checks and routine maintenance
- Safety and procedural compliance
- Independent working
- First-line troubleshooting
- Accurate operational documentation
- Prioritisation under pressure
